## Harnessing the power of health plan data

Health plans serve large populations of unique individuals with specific healthcare needs. CareRadius automates the identification, stratification and medical management for targeted, individualized intervention to improve health.

## Automating workflow for efficiency

CareRadius' robust 360° view of the member enables care collaboration from wellness to chronic condition management. CareRadius is configurable to **ADAPT** to the changing needs of health management.

## Analyzing data for better health decisions

CareRadius web-based architecture:

- maximizes real time information
- reduces data latency and redundancy
- improves the flow of relevant information

# ADAPT

POPULATION

DATA

APPLICATIONS

## Continuity of Care: Working towards a common goal

Health plans, providers and members all want better health and lower costs. CareRadius is the collaborative healthcare solution.

# SHARE

REAL TIME

# COLLABORATE

## Empowering members with knowledge

CareRadius allows health plans to **SHARE** relevant tools and information with members and providers via bi-directional communication for better health decision-making:

- education on conditions
- care planning
- discharge plans

## CONNECTED HEALTH TEAMS

CareRadius connects providers, members and health plans. **COLLABORATION** improves health.

## Supporting incentives to succeed

CareRadius enables better care management for improved STAR ratings, HEDIS scoring, URAQ, NCQA, regulatory and other important quality indicators all leading to greater compliance and pay-for-performance.

## Bringing together all areas of care

CareRadius empowers trusted relationships by giving providers relevant information to serve their patients. Providing risk-bearing entities (PCMH, ACO, etc.) with technology tools and population analytics improves medical management operations and optimizes cost.
